

Excerpt from UAP Tracker Abstract 2022 – PW 02/02/2023

First Year October 2021 to October 2022 Highlights

1) Long duration event

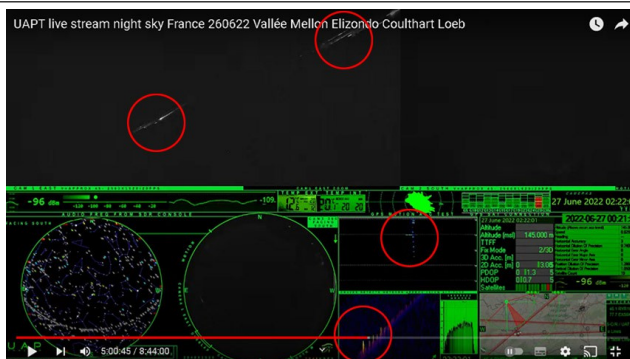

1) This **long duration event** was captured on Camera 1 East / Fisheye Camera and passive forward scatter radar 12/11/2021 18:36 France. Notably, no aircraft were detected within a 20 NM easterly direction of my location, as confirmed by data from ADSB Exchange.

1) Long duration event

Long duration event **Camera 1 East** unedited [link](#)

2) Unknown multiple objects

2) **Unknown multiple objects** of long duration captured on **3 cameras** – possible passive forward scatter radar signature - 27/06/22 02:22 France (rocket debris re entry?)

Live stream with possible passive forward scatter radar signature [link](#)

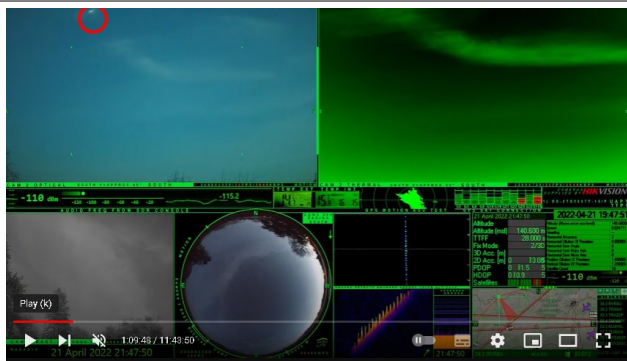

2) Unknown multiple objects

Multiple objects **Camera 2 South** unedited [link](#)

Multiple objects **Camera 1 East** unedited [link](#)

Multiple objects **Fisheye Camera** unedited [link](#)

3) Slow moving

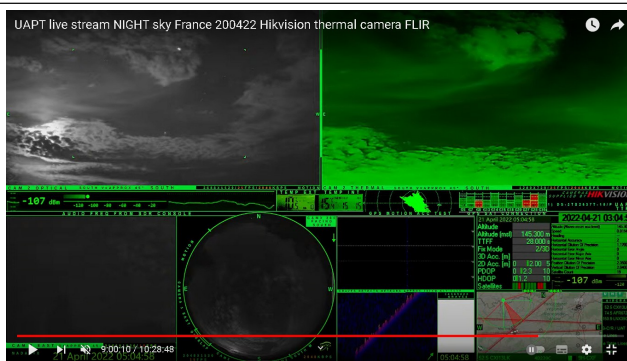

3) **Slow moving** satellite with halo effect / possibly Space X debris. Captured on **HIKVISION optical camera** 21/04/22 21.48 France. During this event the camera switched into night time mode. Reports of this event indicate it was also visible across France and UK. Google [multiple reports](#)

Live stream no obvious passive forward scatter radar signature [link](#)

3) Slow moving

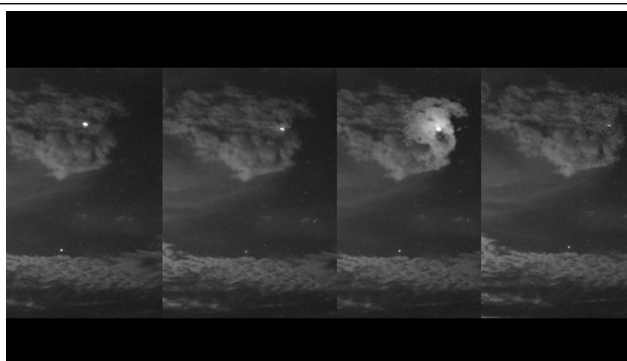

Slow moving satellite **Camera 2 optical** [link](#)

4) Meteor flash

4) A fast moving **meteor** that seems to explode / flash above the clouds captured on the **HIKVISION optical camera** 21/04/22 05.03 France

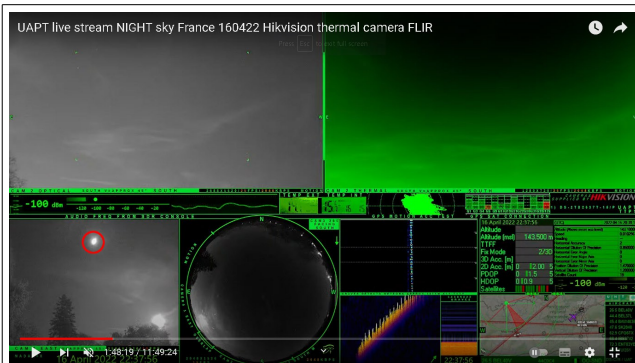

Live stream of meteor (not visible on thermal camera) [link](#)

4) Meteor flash

Meteor **HIKVISION Camera 2 optical - zoomed** [link](#)

5) Possible fireball

5) Possible fireball or meteor passing over my location 16/04/22 22.37 France. There was a delay to the Fisheye camera during the event.

Live stream no obvious passive forward scatter radar signature [link](#)

5) Possible fireball

Fireball / meteor Camera 1 East (glitch) [link](#)
